

Hy-C[®] cream was developed for the treatment and wellbeing of the eyes, after more than 10 years' experience of Eye Pharma S.p.A. in the ophthalmological field. Hy-C[®] cream is an innovative, highly specific cosmetic treatment to promote the beauty and health of the skin around the eyes and eyelids (periocular region).

Indications Hy-C[®] cream is a cream with a silky texture and rapid absorption. Active ingredients of Hy-C[®] cream may help moisture and soothe the skin while reducing the appearance of fine lines and wrinkles. Ideal especially for skin types sensitive to external influences (atmospheric agents, make-up, pollution), or as maintenance of aesthetic skin treatments.

Composition/main active ingredients Hy-C[®] cream is a formula based on specific active ingredients, with a targeted and synergistic action to counteract the various causes of aging in the periocular region:

1. LIFTING AND MOISTURIZING ACTION

HYALURONIC ACID (sodium hyaluronate): this is a molecule, which binds with and retains tissue hydration essential for the skin's elasticity and firmness. Moreover, hyaluronic acid together with collagen and elastic fibers defines skin structure and confers its resistance and maintenance of cutaneous tone. Over time, with exposure to ultraviolet rays and pollution, the concentration of hyaluronic acid present in the tissue diminishes and therefore the skin loses moisture and elasticity, with formation of wrinkles and reduction of cutaneous firmness. For this reason, the youthful appearance of the skin is strictly dependent on its presence. Hy-C[®] cream, thanks to the presence of 3 different types of hyaluronic acid, acts as:

Filler: hyaluronic acid with its heavy molecular weight remains on the surface where it retains enormous amounts of water. This protective and filling action helps to attenuate fine lines.

Long-term hydration: reticulated (cross-linked) hyaluronic acid, which is more resistant to breakdown, confers long-lasting hydration as well as a more uniform and firm appearance.

Antiaging: the low-molecular weight hyaluronic acid easily penetrates the cutaneous barrier, replenishing and plumping deep creases.

Hy-C[®] cream is made of pure hyaluronic acid, free of contaminating agents: in fact, hyaluronic acid is not derived from animal sources, but obtained through a fermentation process.

NEW GENERATION BIOPOLYMER (hydrolyzed manihot esculenta tuber extract): quickly adheres to the skin, forming a viscoelastic film with a toning effect that counteracts cutaneous creases.

2. SOOTHING ACTION

SPECIFIC PEPTIDE (acetyl tetrapeptide-5): prevents breakdown of collagen fibers, thus increasing cutaneous elasticity. Its marked draining and anti-edema action promotes the reduction and attenuation of bags and dark circles under the eyes.

ASH EXTRACT (extract of the bark of fraxinus excelsior): improves the lymphatic microcirculation of the periocular region with its vasoprotective activity.

HONEY LOTUS EXTRACT anti-inflammatory activity and powerful anti-edematous action.

3. LENITIVE ACTION

BETA GLUCAN (sodium carboxymethyl betaglucan): natural polymer able to stimulate the immune system, protecting the more sensitive skin from damage caused by aging, external agents, UV rays, and free radicals.

EXTRACT OF SICILIAN RED ORANGES (citrus sinensis fruit extract): in particular, the RED ORANGE COMPLEX[®] content in Hy-C[®] cream is a unique extract, rich in polyphenols and vitamin C, with high anti-oxidant and photoprotective activity able to protect the skin from damage caused by UV rays, and counteract the effects of free radicals and toxic substances such as smoke and pollution, thus supporting the natural defense systems of the skin.

Hy-C[®] cream:

- Does not contain added fragrances
- Dermatologically & Ophthalmologically Tested
- Nickel tested <1ppm
- Not tested on Animals.
- Reduces Dark Circles, Crows Feet and Bags Around Eyes.

Instructions for use Apply of few drops of the product around the eyes morning and night on clean skin under each eye, starting from inner corner of the eye towards the outside, and continuing on the eyelid. Gently massage into the skin until completely absorbed. (fig.1)

This product works well with all skin types and works well under makeup. Use sunscreen and avoid prolonged exposure to bright sun while using this product.

Warnings This is a cosmetic treatment for use on healthy and intact skin. In case of postoperative use, apply only when the skin has healed. Avoid direct contact with the mucous membrane of the eye. FOR EXTERNAL USE ONLY. Discontinue use if irritation or redness occurs. Keep out of reach of children.

Net volume 0.5 fl oz/ 15 ml
